<u>Report</u>

Training accuracy: .861
Training Loss: 0.419
Testing Accuracy: 0.833
Testing Loss: 0.506

<u>Analysis</u>

This project went better for me than the previous one as I was able to get all the required values correctly. Making a graph be a requirement for the report was good as it visually showed the performance of accuracy and loss for test and train data. As mentioned in the lectures the performance did steadily improve as the algorithm went through each of the epochs with the best performance for both datasets in both the accuracy and loss calculations coming at the last epoch.
